## **PRODUCT DESCRIPTION**

### **Features**

Sitting on a Swopper is "sitting in motion". The chair lets you bounce, sway and tilt, mimicking the natural motion of the body. Blood flow increases, which can add alertness and mental clarity.

The unique curve and tilt of the Swopper the seat helps to position the spine correctly. Over time, the muscles surrounding the spine and the abdominals become stronger because they are moving, working and supporting correct spinal positioning.

The Swopper chair is the first ergonomic office chair in the world to move in all three dimensions. For dynamic, ergonomic sitting. The function, design and engineering of the Swopper have won many awards.

When you sit on a Swopper chair you:

- strengthen your back
- train your muscles
- breathe deeper
- improve your concentration
- stimulate your circulation
- have fun sitting and working

Good circulation. Good mood. Sitting on the Swopper chair makes you straighten the upper part of your body, which frees the diaphragm, helping you breathe deeper and stimulate circulation. The result is better performance and higher concentration. Apart from that, bouncing up and down is good for the mind and soul - because it is pure, simple fun.

Always in motion. By keeping balance on the sprung seat your body is always slightly in motion. Since the Swopper chair can tilt towards your working surface, there is no longer any need to hunch your back.

Training for your muscles. Your entire body is slightly in motion all the time on the Swopper, so practically all muscle groups remain active and well supplied with blood. The entire musculoskeletal or locomotor system is strengthened and can better keep your back upright. An active back cannot tense up and causes no pain.

Keeping ligaments and joints fit. Moving your joints, even when sitting, stimulates the formation of synovia (joint fluid). This prevents arthritis and tightens the ligaments and tendons. In this way you can avert joint diseases.

The age-old problem: straitjacketed sitting. Life means motion. The human body is not made for staying in one and the same position for hours on end. No wonder that almost 80% of the population of industrial nations suffer from backache. On a conventional office chair your body is locked in a seat pan between two armrests and the backrest and has to adapt to the inflexibility of the seat. The result: hunched back, tension, pain.

The solution: sit your way free! The ergonomic, sprung, active Swopper swivel chair adapts itself to you - not vice versa. Thanks to its worldwide unique flexibility, the Swopper chair provides active sitting in three dimensions: backwards, forwards, sideways and up and down too. This dynamic supports and encourages healthy sitting in ever changing positions. Scientific studies confirm that on the Swopper chair you move twice as much as on conventional seats.

3yr Warranty

130kg Weight Rating

Seat Size: 400mm x 400mm
